### **REASONS FOR ALLOWANCE**

1. The following is an examiner's statement of reasons for allowance: The Applicant claims a fuel cell manufacturing method comprising a process of feeding a polymer electrolyte membrane formed in strip form having conveyance holes, a process of positioning and fixing a catalyst layer, a gas diffusion layer, and a separator on surface of membrane, a process of forming a catalyst layer at predetermined intervals in lengthwise direction on surface of membrane and forming positioning marks in accordance with position of catalyst layer, and a process of using a sensor to detect a displacement speed of conveyance holes and passage of positioning marks at a predetermined point through which membrane passes, and a process of determining a timing for positioning and fixing catalyst layer, gas diffusion layer and separator on surface of membrane on basis of displacement speed of conveyance holes and a detection timing of positioning marks. Applicant claims a fuel cell manufacturing method comprising a mechanism for feeding a polymer electrolyte membrane formed in a strip form having conveyance holes and positioning marks formed at predetermined intervals, a mechanism for positioning and fixing catalyst layer, gas diffusion layer, and separator on surface of membrane on basis of conveyance holes and positioning marks, wherein membrane comprises catalyst layer formed on surface, a mechanism for using a sensor to detect displacement speed of conveyance holes and passage of positioning marks at predetermined point through which membrane passes, and a mechanism for determining a timing for positioning and fixing catalyst layer, gas

diffusion layer, and separator on surface of membrane on basis of displacement speed of conveyance holes and a detection timing of positioning marks.

In the prior art of record, Nagayama, JP 2001-236971, teach a fuel cell manufacturing method. Yoshida et al., JP 2002-313354, teach a positioning process using sprocket holes and sprocket wheels.

However, the prior art of record, taken either alone or in combination, fails to disclose or render obvious a process of or a mechanism for using a sensor to detect a displacement speed of the conveyance holes and passage of the positioning marks at a predetermined point through which the polymer electrolyte membrane passes and a process of or a mechanism for determining a timing for positioning and fixing any of the catalyst layer, the gas diffusion layer, and the separator on the surface of the polymer electrolyte membrane on the basis of the displacement speed of the conveyance holes and a detection timing of the positioning marks.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
